SUMMARY

SOC Analyst with hands-on experience in alert triage, log analysis, and incident response across enterprise attack scenarios, combined with **8+ years operating inside a regulated banking environment** at Banque Misr. (ISC)² CC certified, Blue Team Cybersecurity Diploma (Grade 100). Diploma project investigated a full Active Directory compromise in a financial-institution scenario — from initial access through persistence and exfiltration — mapped to MITRE ATT&CK. Hands-on lab experience with Splunk and QRadar for Windows and Linux telemetry analysis.

SKILLS

SIEM & Detection. Splunk (searching, alert investigation, dashboards), IBM QRadar (offense analysis, log correlation)

Incident Response. Alert triage and escalation, IOC identification and enrichment, MITRE ATT&CK mapping, containment and eradication planning, attack-chain reconstruction

Operating Systems & Telemetry. Windows Event Logs, basic Windows forensics, Linux logs and process analysis

Active Directory Security. Lateral movement detection, account manipulation, persistence mechanisms, domain-level compromise analysis

Networking & Protocols. TCP/IP, DNS, HTTP fundamentals

Regulated-Environment Operations. Banking compliance workflows, audit-grade documentation, segregation-of-duties awareness, access governance, escalation procedures

PROJECTS

Threat Intelligence & Incident Response: Full Domain Compromise of a Financial Institution

AMIT Diploma Project · 03/2025 – 09/2025

- Investigated a simulated Active Directory compromise of a financial-institution environment, tracing the attack from initial access via malicious macro through persistence and data exfiltration.
- Reconstructed the full attack timeline from Windows event logs and endpoint telemetry.
- Mapped attacker techniques to MITRE ATT&CK, including SMB lateral movement (T1021.002) and account manipulation (T1098.002).
- Identified IOCs including malicious executables, C2 infrastructure, and unauthorized accounts.
- Produced a complete incident response report with containment, eradication, and hardening recommendations.

Hands-on Labs & Training — TryHackMe SOC Level 1

- Completed 150+ labs covering alert triage, phishing analysis, log investigation, and threat intelligence.
- Practical exposure to SOC workflows, attacker TTPs, and the incident response lifecycle.

Epidemic Lab — Multi-Agent AI Adversarial Simulation (*Independent Research*)

- Self-directed research project studying adversarial behavior across LLM-powered agents using Docker, FastAPI, and Redis. Demonstrates initiative, applied detection thinking beyond curriculum work, and engagement with emerging AI-related threats relevant to financial-sector security.

PROFESSIONAL EXPERIENCE

Banque Misr — Administrative Assistant, Corporate Banking & Syndicated Loans

New Cairo · 02/2016 – Present

- 8+ years operating inside a tier-1 Egyptian bank under continuous compliance and audit scrutiny — direct working familiarity with segregation-of-duties controls, access governance, escalation chains, and the operational realities of a regulated financial-services environment.
- Coordinated with IT teams to resolve access, connectivity, and account incidents following internal procedures and documented escalation paths.
- Maintained audit-grade documentation across daily operational workflows.

EDUCATION

Cairo University — Bachelor of Law (2018)

CERTIFICATIONS

- (ISC)² Certified in Cybersecurity (CC) (*January 2026*)
- Blue Team Cybersecurity Diploma — AMIT (*Grade: 100*)
- TryHackMe SOC Level 1 Pathway — 150+ labs

ADDITIONAL

Languages. Arabic (native), English (professional working proficiency)

Availability. Open to 24/7 SOC shift rotation and on-call rotations
